Testimonials

We are very pleased to expand our relationship with Visionet with the recent launch of our enterprise imaging and document classification project. Visionet has delivered 138 million images in 2020 with more than 15 million images each month for the last two quarters with SLA for turnaround time and quality currently standing at 100% and above 99% respectively.

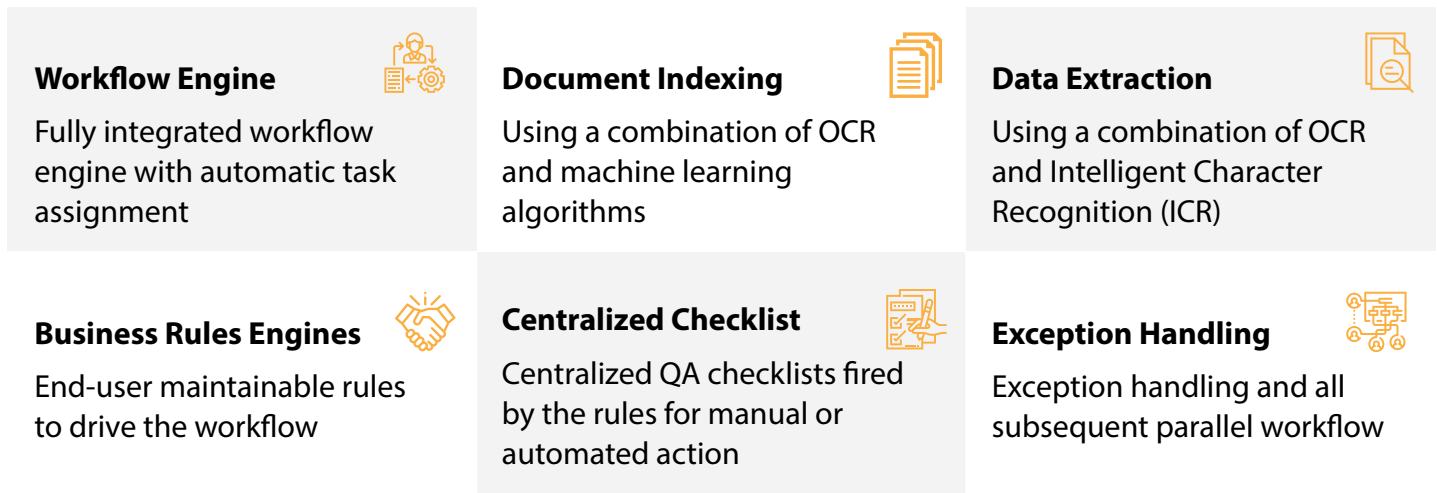

- SVP, Servicing and Consumer Products
Leading National Bank in USA

We were trying to find a solution for our Post Close audit process which was done 100% manually. Visionet was very responsive and was able to understand the needs of my business unit & customize their solution to meet those needs. We leveraged Visionet's DocVu.AI and technical team services to automate this process. This led to a time-saving of more than 90% of the previous process in place. I am extremely satisfied with Visionet's knowledge and effort to make this engagement successful. Much of the custom changes requested were very detailed, Visionet's extraordinary speed at making those changes is what truly impressed me.

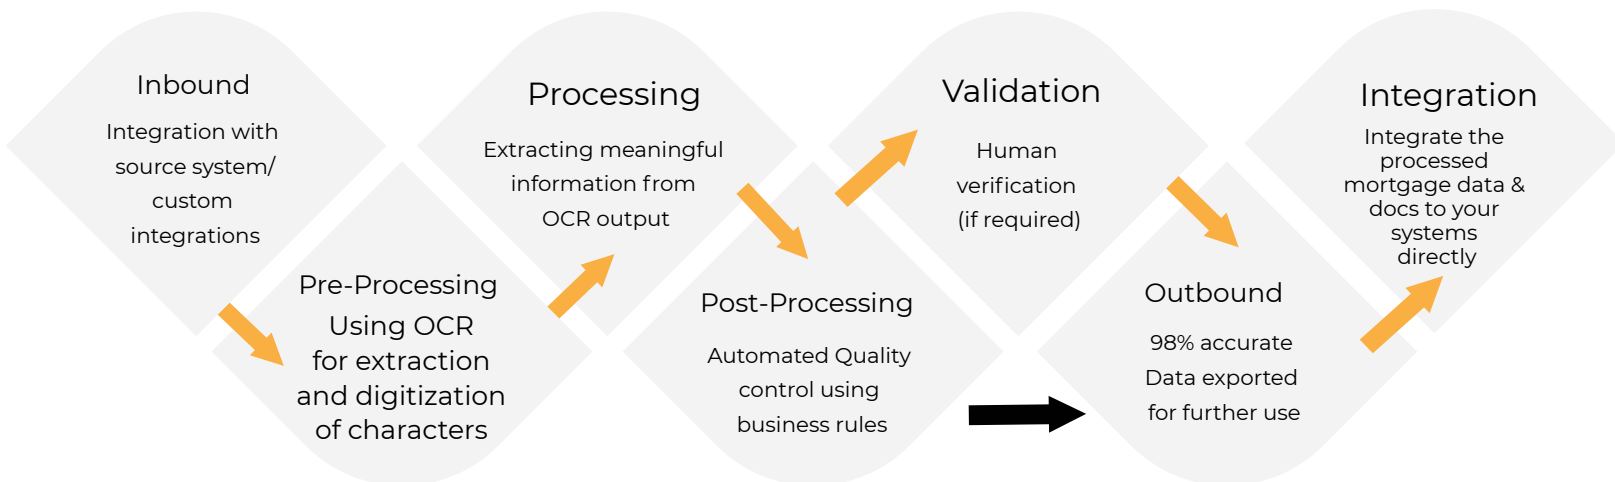

- Regional Head of a Mortgage institution in USA

Key Features

Workflow

The AI/ML based OCR technology uses the triple-pass methodology to strip and validate content using NLP, ICR & OMR. The system perpetually improves itself over time to provide progressively accurate results. Here is a workflow of how our solution integrates with your source system and processes the information.
