Introducing DocVu.AI

DocVu.AI is a cloud-based open, robust and enterprise-grade Intelligent Document Processing solution which improves quality, reduces manual effort and shortens closing cycle.

DocVu.AI accelerates

loan processing which leads to better customer relationships and increases revenue opportunities.

DocVu.AI minimizes

customer frustration which leads to lower customer drop-offs.

DocVu.AI offers

98% accuracy which improves loss mitigation and increases customer satisfaction.

DocVu.AI improves

operations resilience & allows the teams to work from home and still maintain regulatory compliance.

Visionet's DocVu.AI supports mortgage loan processing from loan origination, application, approval, closing, second closing and even servicing and securitization.

All this comes at **zero front-end cost** and a **pay-as-you-use** pricing model.

Testimonials

SVP, Servicing and Consumer Products Leading National Bank in USA

We are very pleased to expand our relationship with Visionet with the recent launch of our enterprise imaging and document classification project. Visionet has delivered 138 million images in 2020 with more than 15 million images each month for the last two quarters with SLA for turnaround time and quality currently standing at 100% and above 99% respectively

Regional Head of a Mortgage institution in USA

We were trying to find a solution for our Post Close audit process which was done 100% manually. Visionet was very responsive and was able to understand the needs of my business unit & customize their solution to meet those needs. We leveraged Visionet's DocVu.AI and technical team services to automate this process. This led to a time-saving of more than 90% of the previous process in place. I am extremely satisfied with Visionet's knowledge and effort to make this engagement successful. Much of the custom changes requested were very detailed, Visionet's extraordinary speed at making those changes is what truly impressed me

Workflow

The AI/ML based OCR technology uses the triple-pass methodology to strip and validate content using NLP, ICR & OMR. The system perpetually improves itself over time to provide progressive accurate results. Here is how the workflow of our solution integrates with your source system and processes the information.

Key Features

Workflow Engine

Fully integrated workflow engine with automatic task assignment.

Document Indexing

Using a combination of OCR and machine learning algorithms.

Data Extraction

Using a combination of OCR and Intelligent Character Recognition (ICR).

Business Rules Engines

End-user maintainable rules to drive the workflow.

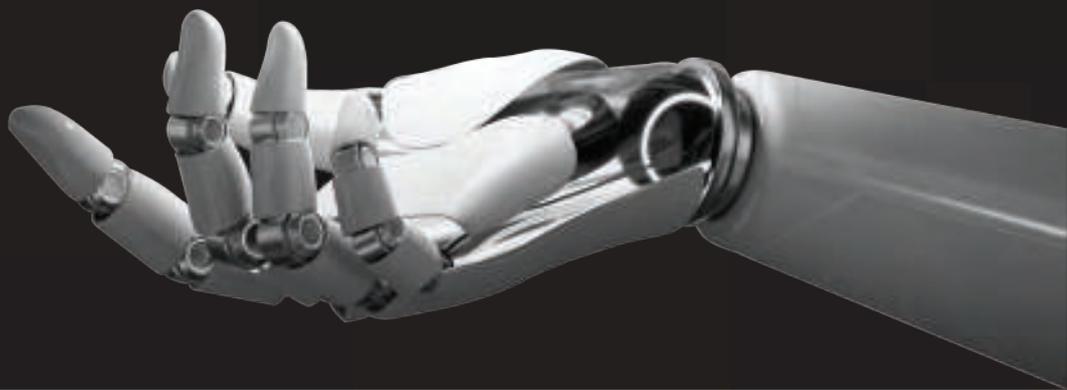

Centralized Checklist

Centralized QA checklists fired by the rule for manual or automated action.

Exception Handling

Exception handling and all subsequent parallel workflow.

Comparative Analysis

	Without DocVu.AI	With DocVu.AI
Data Accuracy Rate	50%	98%
Processing Cost	No Reduction	50% Reduction
New Seller onboarding time	3-4 Months	10 Days
Scalability	Non-Scalable	Easily Scalable to Capacity

Business Benefits

 Save 30% Costs Reduce iterations, close faster, save costs	 Reduce Time by 80% Process loan packages in less than 4 hours.	 99.5% Data Extraction Accuracy Drastically improves accuracy
